

Summary of PTG Technology

1. Generate onsite electricity at half the cost of utility-purchased power.
2. Use “free” exhaust heat from turbine/engine to heat facility’s water/steam for processing needs, cutting natural gas costs.
3. Save excess thermal energy in hot water storage system
4. Save excess electrical energy in battery storage system
5. Initial system establishes a foundation for adding other water and energy technologies, including water reuse and renewable energy from biogas.

PTG Patented Cogen Technology

PTG Patented Cogeneration System
